RooMate: Architecting Shared Living

Because the "Who" is as important as the "Where."

The Hook

Urban living is booming, but finding a home is stressful. RooMate isn't just a property portal; it's a compatibility engine.

The Mission

To transform fragmented house-hunting into a harmonized social experience.

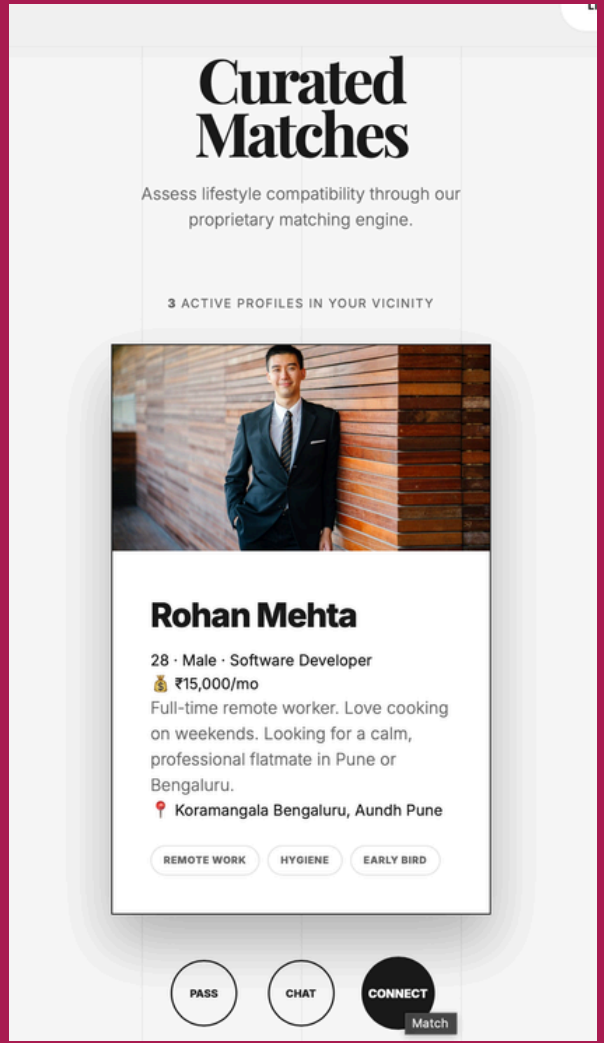
Target Market

Students and young professionals in India's Tier-1 cities (Mumbai, Bengaluru, Delhi).

The "Blind Date" of Housing

Why traditional roommate hunting fails.

- **Personality Clashes**: Traditional sites show you the room but hide the roommate's habits (cleanliness, noise, guests).
- **Financial Friction**: Lack of transparency in "hidden costs" like utility splits and security deposits.
- **Safety Concerns**: High anxiety regarding the safety and background of potential co-livers in a new city.
- **The Pain Point**: 70% of roommate conflicts arise from lifestyle mismatches, not the property itself.



RooMate - Shared Living, Harmonized

A human-centric approach to finding home.

Lifestyle-First Discovery: A 7-point diagnostic quiz that builds a "Compatibility Blueprint."

Swipe-to-Match: A familiar, gesture-based interface to browse potential roommates based on personality, not just budget.

Data-Driven Peace of Mind: Integrated "Safety Scores" and verified property listings.

The Result: Moving in with a partner you already understand, rather than a stranger you just met.

System Architecture & Key Features

Simple tech, powerful results.

Core Modules:

Smart Listings: Dynamic filtering by location, BHK, and "vibe" tags (WFH, Pet Friendly).

The Utility Splitter: A built-in financial tool to simulate and plan monthly expenses.

The Methodology:

Vanilla Tech Stack: Built with HTML5, CSS3, and JavaScript for maximum speed and responsiveness.

Weighted Logic: A simple algorithm that compares user lifestyle tags to generate a percentage-based match score.

Visual Strategy:

Mobile-first, "Magazine-style" UI for a premium, clean aesthetic.
